## **METALS OF AFRICA: MONTEPUEZ MAIDEN RESOURCE SUPPORTS PFS**

**Maputo**, Nov 16

MTA has begun a prefeasibility study on its Montepuez Central graphite project in Mozambique after posting a maiden mineral resource of 61.6Mt at 10.3% TGC and 0.26% V2O5 at the Cabo Delgado province deposit.

For the Australian explorer, the resource backs its aim to become a low-cost producer of natural flake graphite. It's also undertaking economic assessment of a spherical graphite facility and begun off-take discussions with end users.
